

## "Nature's Gift from the Sunny South"

# Cottolene

## Shortens your food—Lengthens your life

If you knew that lard was unhealthy, would you still eat lard-soaked food? Even lard manufacturers admit that there is only enough pure leaf lard made to supply one-tenth the lard consumption. How do you know that you are not one of the other nine-tenths who are taking grave chances?

Cottolene is a pure vegetable product, which contains no hog fat. It makes wholesome, digestible, healthful food. Why take chances with swine fat?

Made only by THE N. K. FAIRBANK COMPANY, New York, New Orleans, Chicago.

### THE PRODUCTIVE VALLEY OF THE YAQUI RIVER

#### THE STORY OF ITS DEVELOPMENT.

The Extensive Scale on Which it is  
Going On.

Esperanza, Sonora, June 22.—(Special correspondence of The Republic.)—Just as a few years ago the attention of the east was turned toward the rich and fertile valleys of the southwest, now attention is being attracted to the great west coast of Mexico, through which the Southern Pacific is building and into the development of which the wealth of many eastern capitalists is being poured. The country is rich in opportunities, mining, ranching and business ventures which are vying with one another and going hand in hand into every locality.

Enough generalization, this article is intended as a sketch of the development of but one valley, known as the Yaqui River valley, which is practically controlled by the Richardson Construction company. Imagine a stretch of 600,000 acres of land, level as a floor, having but a gentle slope, which is owned and controlled by one company, owning perpetual water rights. Such are the holdings of the Richardson Construction company. Such men as John Hays Hammond, Harry Payne Whitney, Major F. R. Burrham and Leigh Hunt, have recently become interested and are pouring their money into the valley and backing the project, the Richardson retaining the active management as they have for many years.

The land is covered with heavy mesquite and such a variety of cactus

that it is beyond description. One will pass for miles through great stretches of mesquite which make one think of the largest pepper trees and are very similar, then will come long stretches of giant cactus the size and general growth of which is beyond belief of even the average Arizonian. If there is truth in the statement that only good land is covered with a dense growth, then this valley is heaven without investigation. The valley is the delta of the Yaqui river and in every way is similar to the imperial valley. The soil is rich, the climate ideal; anything that can be raised in tropical or semi-tropical countries can be raised here. Shipments of the very finest grades of oranges have been made since May 15th. Corn, wheat, guavas (—of peaches, beans and all staple crops are grown with a heavy yield and bring high price. Two crops of staples are grown every year. Alfalfa grows over night and demands \$15 to \$18 gold per ton. How many cuttings a year? No one seems to know. Ask a Mexican farmer that question and he will look at you kind of queer and finally say that he doesn't know, that he cuts his every month in the year.

The company is doing an immense amount of development work, the main canal now extends for twenty-six miles and there are over fifteen miles of laterals now built, all constructed on a gigantic scale. Land is cheap and easily cleared; there is plenty of water and all it lacks is the American farmer with a little capital and some modern machinery to make it the most wonderful valley on the American continent. Already over 30,000 acres have been sold to the American farmer.

Think of it; land here to be furnished with water at \$25 per acre, easy payments, good markets, what more can the young man want who is looking for opportunity.

L. G. Simard, formerly with the Southern Pacific, is manager. Several of the former United States reclamation service officials are identified with the company. Among them are L. H. Taylor, former super-

vising engineer of the Truckee-Carson project; R. H. McGregor, Clyde Taylor, G. B. Williams, L. MacDowell and C. M. Paddock.

This is a wonderful country with a wonderful future right at the back door of Uncle Sam's domain. Let the skeptical come and see; they will surely be convinced before they get away.

### FILLING THE JAIL BY INSTALLMENTS

The Strenuous Work of Constable Murphy on a Warm Day.

Constable James Murphy yesterday began filling the jail on the installment plan. He had been wandering about in the vicinity of the domicile of Francisco Franco and found three men fighting in the back yard. One of them was a gigantic Mexican by the name of Alvarez. The officer mingled with them and told them to consider themselves under arrest. They turned upon the officer in concert and called him names.

The officer was armed only with a little 12 which is of no use for clubbing purposes and he therefore did not use it but mixed with Alvarez and knocked him down. The other two men ran into the house and the officer started off to jail with Alvarez.

On his way he met two Mexicans whom he knew and turned the prisoner over to them. He returned for the others and one said that he would not be taken. The officer held the little pistol under his nose but it had no terrors for the evil doer who invited him to shoot. The officer put the gun in his pocket and knocked this man down and took him off.

He found another crowd and deputized the posse to take the second man to jail. He then went back to the house and knocking the third down landed him in the bastille in person. In the course of the various encounters the officer's shirt was torn to tatters.

### AN EARLY BELIEF IN ARVISO'S GUILT

Trinidad Arviso, the proprietor of the El Fresnal store was tried in Justice Parker's court yesterday on the charge of receiving stolen grain from the marauding firm of F. Velarde and Joe Roberts, and was found guilty. Eleven members of the jury signed the verdict but under the new law relating to misdemeanors that was more than enough.

Arviso would have done better if he had told what the jury believed to be the truth and it would not have prejudiced his case either. He was evidently trying to shield Velarde and swore that he had known him and of the transactions in which he acquired forty-four sacks of the stolen grain. He also said that the grain had always been delivered in the day time.

Roberts swore that the deliveries were always made at unearthly hours of the night, never in the day time and that Velarde was always along and managed the transactions. He said that the grain was sold for \$1 a sack, a suspicious circumstance in itself as barley was regularly selling at \$1.40 a hundred weight.

The jury reached a verdict within a few minutes after the submission of the case. When it was brought in, B. E. Marks, attorney for the defendant, was not present and he did not arrive until after it had been announced. He raised an objection to it on the ground of his absence at the time it was delivered. Sentence will be passed upon Arviso today as on Roberts and Velarde who had pleaded guilty.

To Abolish the Fly.  
It happens every day, and so one pays very little attention. Maybe it is the butter, or perhaps the slice of bread alongside one's plate. Or else, quite possibly, it is the milk in the pitcher. But, whatever it is that at-

tracts the omnipresent fly, its appearance, as it crawls over the food on the table, is unappealing.

The health authorities of New York City estimate that about one-half of the deaths from typhoid in the metropolis annually are attributable to the distribution of the germs by flies. But, serious as the matter is, it is of vastly less importance than the destruction of human life, particularly that of the young children, by the bowel complaints which these insects are chiefly instrumental in spreading. It is reckoned that deaths from these latter maladies in New York would be reduced from 7,000 to about 2,000 a year if proper precautions were taken to prevent the breeding of flies.

The insects will breed in fermenting vegetable or animal material of almost any kind. Garbage suits them first-rate. The maggots and chrysalids have been found in great numbers in rotten straw mattresses, among old cotton garments and even in waste paper that has been exposed to wet.

Now, so far as stables are concerned, which are accountable for 95 per cent of the fly output in cities, the hatching of the insects can be absolutely prevented by the simple device of putting all manure into a covered receptacle and removing the contents once a week. This receptacle should be a water-tight bin or pit, provided with a cover, so as to prevent the ingress and egress of flies.

The additional methods demanded are the following: Abolish all unsanitary conditions. Allow no accumulations of filth of any kind. Compel people to put all their garbage in covered cans and remove the contents at least once a week. Compel owners of abattoirs to keep all refuse in covered receptacles; and remove such waste at least once a week.—From "Poisoner a Table Guest," in July Technical World Magazine.

### WORTH MOUNTAINS OF GOLD

During Change of Life,  
says Mrs. Chas. Barclay

Graniteville, Vt.—"I was passing through the Change of Life and suffered from nervousness and other annoying symptoms, and I can truly say that Lydia E. Pinkham's Vegetable Compound has proved worth mountains of gold to me, as it restored my health and strength. I never forget to tell my friends what Lydia E. Pinkham's Vegetable Compound has done for me during this trying period. Complete restoration to health means so much to me that for the sake of other suffering women I am willing to make my trouble public so you may publish this letter."—Mrs. CHAS. BARCLAY, R. F. D., Graniteville, Vt.

No other medicine for woman's ills has received such wide-spread and unqualified endorsement. No other medicine we know of has such a record of cures of female ills as has Lydia E. Pinkham's Vegetable Compound. For more than 30 years it has been curing female complaints such as inflammation, ulceration, local weaknesses, fibroid tumors, irregularities, periodic pains, backache, indigestion and nervous prostration, and it is unequalled for carrying women safely through the period of change of life. It costs but little to try Lydia E. Pinkham's Vegetable Compound, and, as Mrs. Barclay says, it is "worth mountains of gold" to suffering women.

### Let the Coal Fire Go Out

At the first suggestion of summer weather let the range fire die out, set a New Perfection Wick Blue Flame Oil Cook-Stove in a corner of the kitchen, and at once the family boiling, frying and baking may be done with comfort, because the "New Perfection" delivers the heat under the kettle and not under the room. Another convenience of the

### NEW PERFECTION Wick Blue Flame Oil Cook-Stove

is its CABINET TOP—a feature found in no other oil stove. Presents the appearance of a steel range. Fine for holding dishes—for keeping meals hot after they are cooked—for warming plates and for keeping towels handy. Made in three sizes—with or without Cabinet Top as desired.
